## The Nikon System for 35mm Photography

The system approach—the concept of extending the advantages of the 35mm slr camera to all areas of photography—has been the cornerstone of Nikon slr design from the very beginning. It is on this principle that the Nikon system has evolved with singular success through the years and continues to evolve. Today, the Nikon system has as its nucleus three basic slr cameras:

#### Nikon F2 • Nikon FM • Nikon EL2

Each offers specific advantages, depending on the photographer's individual needs and preferences and on the type of photography to be accomplished. Yet, all three share the unmistakable stamp of Nikon system design unity. This is a purposeful unity, intended not only to permit the interchange among all the cameras of hundreds of Nikon system lenses and accessories but also to enable the photographer to move from one Nikon camera to another with the reassurance of an essential similarity of major controls and operating patterns. Features shared by all Nikon F2-series, FM, and EL2 cameras include:

- Interchangeability of Nikon System Lenses ... more than 55, from 6mm to 2000mm.
- Interchangeability of Nikon Accessories for close-up, macro and micro work, viewfinder attachments, flash units and systems—even, in many instances, carrying cases... an array of more than three hundred precision aids freely interchangeable between Nikon cameras.
- Center-Weighted, Through-the-Lens Metering, proven through literally millions of exposures as the most consistently accurate for throughthe-lens exposure control.
- High-Performance Automatic Firepower
   Capability, through photography's largest system of Motor Drives and Auto Winders, each built for use with specific camera models.
- All-Metal, Focal-Plane Shutters, assuring accuracy and durability unattainable in other shutter types.
- Uniquely Smooth, Responsive Handling with the convenient 'Apollo' film transport lever, which also activates the exposure meter, and the famed Nikon 'K'-Type finder screen with 3-way focusing accuracy... features patterned after Nikon cameras built for the U.S. space program.
- Rugged, All-Metal Construction to uniform standards of precision so exacting that Nikon cameras have been used successfully under conditions ranging from tropic heat to arctic cold, from outer space to the ocean floor. This ruggedness of construction has made Nikon cameras so reliable that they are overwhelmingly the choice of professional photographers worldwide; it may truly be said that the history of our time is being recorded through Nikon cameras and Nikkor lenses.

## The Nikon System for 35mm Photography

#### **Nikon F2A Photomic**

is the most advanced and most versatile of all Nikon cameras—indeed, of all 35mm cameras. It offers ready interchangeability of all components: viewfinders (including meter/finder systems), finder screens, motor drives, and camera backs, in addition to all lenses and countless accessories from the Nikon system.

#### Nikon EL2

assures correct exposures automatically, electronically, through any reflex-viewing Nikkor lens, accessory, or image-forming attachment. Equipped with the compact, cordless Nikon Auto Winder, it also provides automatic film and shutter winding at rates to 2 frames per second. Its dual Silicon Photo Diode meter complements the fast-handling characteristics of this uniquely easy-to-use, high-performance Nikon.

#### Nikon FM

is the smallest and lightest of all Nikon-system cameras—yet an instrument of formidable capabilities, including high-speed motorized operation at rates to 3.5 frames per second. It offers an advanced dual Gallium Photo Diode meter with brilliant LED exposure readout, precise multiple-exposure capability, and many other, advanced features.

## Nikon F2 Cameras: An Introduction

The Nikon F2 is more than the finest of all 35mm cameras; it is the foundation of the entire Nikon System of 35mm photography—the world's largest. Through its uniquely modular concept and construction, it not only challenges but successfully defies obsolescence, permitting interchangeability of all basic components:

- Interchangeable Nikkor and Al-Nikkor Lenses
   ... more than 55 available, from 6mm to 2000mm.
- Interchangeable Viewfinders ... including Standard Prism; Photomic through-the-lens meter/finders, with expanded sensitivity and automatic-exposure capability; Action Prism Finder; Waist-Level Finder, and 6X Focusing Finder.
- Interchangeable Finder Screens ... 20 precision screens for every need.
- Interchangeable Nikon Motor Drive System... giving up to 5 exposures per second, requiring no modification, not even removal of camera back.
- Interchangeable Backs...including 250- and 750-Exposure Magazines plus Speed Magny Attachments for Polaroid<sup>®</sup> and other large-format films.
- Hundreds of Nikon accessories for every requirement.

Through this ingenious, modular design, the Nikon photographer can, in effect, create an infinite number of picture-taking instruments attuned precisely to his specific needs—today and tomorrow.

There are three basic types of Nikon F2 camera/finder combinations:

- Nikon F2 with Pentaprism Finder DE-1, first choice of photographers employing separate exposure meters.
- Nikon F2 Photomic and F2SB Photomic, supplied with Photomic meter/finders DP-1 and DP-3, respectively, these offer full-aperture, center-weighted metering with all Nikkor lenses with meter-coupling shoe, including all Al-Nikkor lenses; the maximum aperture of the selected lens is indexed with a quick turn of the aperture ring.
- Nikon F2A Photomic and F2AS Photomic, supplied with Photomic DP-11 and DP-12 meter/ finders (respectively), provide center-weighted, full-aperture exposure control, automatic aperture indexing (AI), and through-the-finder Aperture Direct Reading (ADR) with all AI-Nikkor lenses. These most advanced F2 models also permit stopdown metering with non-AI lenses and, like other F2 models, accept all Nikkor slr lenses from 6mm to 2000mm.

Significantly, any Nikon F2 camera can be converted to any other F2 model by simply substituting the appropriate finder—an example of true modular versatility unrivalled in all photography.

## Nikon F2

# Ultimate Precision and Versatility

Nucleus of the Nikon system, the Nikon F2 camera permits the photographer to choose the lens, viewfinder, finder screen, film magazine, even film transport and exposure control system appropriate to any assignment. Its fast-handling, responsive controls simplify every aspect of the picture-taking process. Each of its 1506 individual parts is engineered to quality standards that have made the name Nikon a universal symbol of optical and mechanical excellence.

# Interchangeable Pentaprism Viewfinder

The DE-1 eye-level pentaprism finder supplied with the standard Nikon F2 is silver-coated for maximum brightness and contrast. It gives an upright, laterally-correct image at eye-level and incorporates a built-in ready light for connection with Nikon electronic flash units. Weighing only 3.2 ounces, this compact viewfinder is interchangeable with all other Nikon F2 cameras and accepts all Nikon Eyepiece Correction Lenses and other Nikon eyepiece attachments. Virtually 100% of the film image appears within any F2 viewfinder, for the most accurate image control of any 35mm slr camera.

# Titanium-Foil Focal-Plane Shutter

Exceptionally accurate, resistant to heat and humidity, the Titanium-foil, horizontal-travel shutter is specially "quilted" for extra strength. Basic shutter speed range is 1 second—1/2000th second plus "B", with stepless, continuously variable speed selection from 1/80th second to 1/2000th. Additional shutter speeds of 2, 4, 6, 8, and 10 seconds (or any intermediate interval) are obtained via the built-in self timer. The shutter movement is ball-bearing mounted for ultimate accuracy and repeatability. Shutter curtains "scan" the film plane in just 10 milliseconds. The shutter is built to take the action of motor drive at up to 5 fps.

# Oversize Instant-Return Mirror

Enlarged mirror eliminates finder image cutoff even with long telephoto lenses. Sophisticated damping mechanism virtually eliminates impact shock. Mirror may be locked up for special applications. Entire mirror chamber is effectively baffled and finished in matte material to prevent internal reflections

# Automatic Flash-Synch Adjustment

Setting shutter speed automatically adjusts for flash type in use. Electronic flash synch at all speeds to 1/80th second; FP synch from "B" and 1 to 1/30th and 1/125 to 1/2000th second. Special hot shoe provides cordless synch with Nikon-System flash units; automatic safety switch in shoe prevents electrical shock when unit is not in place. Single PC outlet accepts either Nikon screwin or conventional PC cords.

# Interchangeable Finder Screens

Standard Nikon Type K screen incorporates central split-image range-finder with microprism circle and overall matte/Fresnel groundglass for edge-to-edge brightness. Interchangeable with 20 optional Nikon screens.

### **Short-Stroke Transport Lever**

Large, plastic-tipped lever requires only 120° stroke, or any equivalent number of shorter strokes, to advance film, wind shutter, and count exposure. Lever pivots on ball bearings for smoothest operation. Integral locking device prevents accidental shutter release before transport lever has completed its cycle.

# Accurately-Registered Multiple Exposures

Simply by depressing the rewind button, then operating the film transport lever, the shutter may be recocked, producing multiple exposures in precise registration. As many exposures as desired may be made on a single frame.

#### **Multi-Function Self-Timer**

Calibrated for delays of 2, 4, 6, 8, and 10 seconds. Alternatively, with shutter set at "B" and shutter release fingerguard turned to "T", the self-timer produces accurate slow shutter speeds of these durations, or any intermediate times.

### Easy Film Loading

The hinged back and multi-slotted take-up spool aid fast, error-free loading. Exposure counter automatically resets to "O" when camera back is opened. Rapid-rewind crank rises 6mm above camera top for unobstructed operation. A Film Memo Holder on the camera back accepts the film carton end tab for a practical reminder of film in use. A unique safety lock makes inadvertent back opening virtually impossible.

### **Superior Film Flatness**

Film winds onto take-up spool emulsion-sideout for greatest tension. The large pressure plate, polished guide rails, and cassette stabilizer combine to assure exceptional film flatness for edge-to-edge sharpness.

#### **Other Features**

The fingerguard (around shutter release button) locks/unlocks shutter release, permits time exposures in the absence of a locking cable release, and also allows accuratelytimed exposures of 2, 4, 6, 8, and 10 seconds (in conjunction with the self timer) according to the position selected. Depth-of-field preview is provided for focus check (or stopdown exposure measurement with Photomic meter/finder). Neckstrap eyelets are reinforced with stainless steel, and the camera lensmount is made of chromed steel for maximum durability and strength. The Nikon F2 camera accepts all Nikkor and Al-Nikkor lenses from 6mm to 2000mm. It is supplied in satin chrome (Product No. 1600) or professional black finish (Product No. 1605).

# **Nikon F2A Photomic**

## Optimum Handling Speed and Convenience

# Total Nikon System Versatility

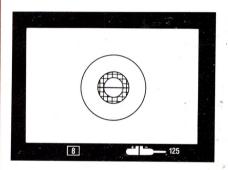

The Nikon F2A Photomic combines the proven reliability of the essential F2 camera with the advanced F2A Photomic Meter/Finder DP-11 for a new level of professional operating speed attuned to today's most challenging requirements. It permits the fullest utilization of the newest Al-Nikkor lenses, while accepting all other Nikkor lenses as well. The latest model of the camera selected by an overwhelming majority of professional photographers, the Nikon F2A Photomic again validates the Nikon premise of excellence through innovation...

# Split-Second Lens Interchange...

With the Nikon F2A Photomic, the photographer need only attach the selected Al-Nikkor lens with a quick quarter turn, and the meter/finder is automatically programmed for maximum-aperture operation. This Automatic Indexing (Al) feature makes lens interchangeability faster and error-free with all Al-Nikkor lenses from 6mm to 600mm.

### ...With Direct Aperture Reading

With any Al-Nikkor lens, the selected aperture is reflected from the lens barrel directly into the viewfinder of the F2A Photomic through the ingenious Aperture Direct Reading (ADR) system. In addition, all other exposure information appears in the F2A finder, including the precise shutter speed in use, meter needle, and over/under-exposure indicators. Exposure can also be checked in a window on the finder top showing meter needle and reference marks.

# Center-Weighted, Full-Aperture Metering

The sensitive CdS meter of the Nikon F2A Photomic provides full-aperture metering with all Al-Nikkor lenses. Stop-down exposure measurement (equally accurate) is used with non-Al lenses, specialized optics such as Reflex and PC-Nikkors, and accessories such as bellows units, microscopes, and telescopes. (Most non-Al Auto-Nikkor lenses can be converted for full-aperture Al operation: please see "Nikkor Lens Al-Conversion" page in Nikkor Lens catalog section for complete details.)-Through the Nikon center-weighted system, the meter's CdS cells observe the entire image area, while concentrating more than half of their sensitivity on a central 12mm area, clearly defined by a circle in the finder, to provide consistently excellent exposures under the broadest range of lighting conditions. The meter, powered by two 1.5v silver oxide batteries in the camera baseplate, is activated by moving the film transport lever to "ready" position 20° from the camera body.

# Nikon F2A Photomic

#### **Fast, Error-Free Operation**

For a correctly-exposed photograph with the Nikon F2A Photomic and Al-Nikkor lens, the photographer need only activate the meter via the film transport lever, adjust lens aperture or shutter speed until the meter needle is centered, and press the shutter release! Both shutter and aperture are crosscoupled to the meter system, and the full information display-shutter speed and selected aperture—in the finder makes it unnecessary for the photographer to remove his eye to check settings... an invaluable advantage in news, action, and candid photography.

# **Nikon F2AS Photomic**

- Ultra-Sensitive
   Silicon Photo Diode Meter
- Quick, Comfortable Handling
- Automatic Exposure Provision
- Total System Capabilities

Every element of the Nikon F2AS Photomic blends together towards one goal: photographs of a range, diversity, and excellence unrivalled in all photography. It combines the legendary Nikon F2 camera—overwhelmingly selected by professionals everywhere—with the latest F2AS Photomic Meter/Finder DP-12 for unprecedented response speed and wide-ranging accuracy. And, with its seemingly endless array of instantly-interchangeable accessories—finders, finder screens, film backs, and motor drive systems—the Nikon F2AS lets you master any challenge, explore any dimension, in all the world of photography.

#### State-Of-The-Art Advances

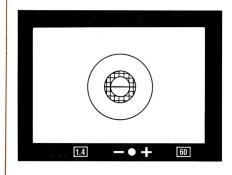

This most sophisticated of Nikon F2 cameras embodies many innovative features for ultimate handling ease and highly accurate operation. The maximum aperture of any Al-Nikkor lens is automatically indexed as you attach the lens with a quick quarter turn. The F2AS Photomic meter operates with the Al-Nikkor lens at its full aperture, so the finder image is always at its brightest; stop-down exposure measurement is also provided for through-the-lens metering with non-Al lenses, non-coupled or special-purpose lenses such as Reflex and PC-Nikkors, and attachments such as Nikon bellows units, telescopes, or microscopes. (Most non-Al Auto-Nikkor lenses can be converted for full-aperture, Al-compatible operation as detailed in the catalog page "Nikkor Lens Al-Conversion" in Nikkor Lens catalog section.) And, the selected aperture of all Al-Nikkor lenses is reflected into the viewfinder via the Nikon Aperture Direct Reading (ADR) system for full visual control at eye-level.

# SPD Meter System with LED Readout

The Silicon Photo Diode meter (DP-12) provides center-weighted exposure measurement of remarkable sensitivity: EV -2 to +17, from eight seconds at f1.4 to 1/2000th second at f8 with ASA 100 film. A brilliant sequential LED display indicates optimum exposure, plus four levels of under-and-over-exposure in these gradations:

| -•+ | Overexposure by more than 1 f-stop  |
|-----|-------------------------------------|
| -•+ | Overexposure by 1/5 to 1 f-stop     |
| -•+ | Correct Exposure                    |
| -•+ | Underexposure by 1/5 to 1 f-stop    |
| -•+ | Underexposure by more than 1 f-stop |

This advanced meter readout system simplifies such professional exposure techniques as "bracketing" without removing the camera from the eye or adjusting the ASA film speed. And, the solid-state meter mechanism is extremely durable and shock-resistant—a vital consideration in motor-drive photography. In addition to the lens aperture, the selected shutter speed (from 1/2000th sec. to 10 seconds) is shown. An external LED readout on the finder top permits exposure check or adjustment without looking through the finder, and an eyepiece shutter is built in to shield the meter from stray light when the external LED readout is used or when the camera is used in automated, remote operation.

# **Nikon F2AS Photomic**

# **Shutter-Priority Automatic Exposure Control**

To transform the Nikon F2AS into a completely automatic exposure camera, you need only slide on the cordless, self-powered EE Aperture Control DS-12; this compact servo unit automatically sets any Al-Nikkor lens to the lens aperture signalled by the camera's meter. By adding a Nikon motor drive, 250-exposure or 750-exposure film back, Intervalometer, and Modulite remote control unit, the photographer can enjoy completely automated, unmanned photography for extended periods, without adjustment. The EE Aperture Control module powers its self-contained servo motor by an interchangeable nicad battery DN-1 or, with the accessory AC/DC Converter MA-4, can operate on standard household AC. Also DB-1 Cell Pack which accepts 4-C-cells.

#### Plus, All Other Nikon F2 Features:

- Titanium-foil-curtain, focal-plane shutter with speeds 10 seconds—1/2000th second.

# **Nikon F2 Photomic**

# Center-Weighted Through-The-Lens Metering Broadens Nikon System Capability

The Nikon F2 Photomic adds an important dimension to the capabilities of the basic Nikon F2 camera: accurate, one-step, through-the-lens exposure metering. Aperture and shutter speed information are displayed in the bright silver-coated prism viewfinder. And, all the versatility of the essential camera is retained, including ready interchangeability of viewfinders, finder screens, lenses, camera backs and motor drives.

### **Center-Weighted Metering**

The CdS sensor cells within the Photomic DP-1 finder cover the full image area but concentrate more than half of their sensitivity on the central 12mm-diameter area shown by a circle on the focusing screen. This system, designed by Nikon, is acknowledged to be the most consistently reliable for through-the-lens exposure control under the widest variety of lighting conditions. It operates accurately with camera in vertical or horizontal position, and regardless of the type of lens used.

### ...At Full Aperture

Metering is done at full aperture with all Nikkor lenses with meter-coupling shoe, including all Al-Nikkors. Stop-down metering (equally accurate) is used with non-coupled lenses or accessories such as extension rings, bellows units, microscopes and telescopes.

### ... Activated by Transport Lever

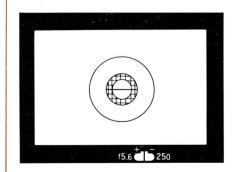

Bringing the film transport lever to "ready" position 20° from the camera body automatically activates the meter; when the transport lever is folded flush with the camera body, the meter is turned off. Power is supplied by two 1.5v silver-oxide batteries housed in the camera baseplate. By pressing the test button on the finder, battery condition can be checked at any time, using either the needle in the finder or that in the external window as a reference.

### **Wide Sensitivity Range**

The specially selected dual CdS cell system gives accurate measurement over a range from EV 1 to 17 (1 sec. at f1.4—1/2000th sec. at f8) with ASA 100 film. ASA range is 6—6400.

# Complete Exposure Information in Finder

Within the Photomic Meter/Finder DP-1, the photographer sees the meter needle and reference mark as well as the lens aperture and shutter speed in use. Meter needle and reference also are shown in a window on the finder top — a valuable aid in low-angle or candid photography, or when the camera is held overhead (upside down) or mounted on a copystand.

# **Nikon F2 Photomic**

#### **Shutter or Aperture Priority**

The F2 Photomic is cross-coupled to both aperture and shutter speed controls; either may be adjusted to center the needle for correct exposure. The continuously variable shutter speeds from 1/80th to 1/2000th second are particularly helpful in obtaining accurate exposure settings, especially with Reflex Nikkor lenses, microscopes, or other instruments without lens diaphragms.

### **Built-In Flash Ready-Light**

Activated by accessory Ready Light Adapter SC-4, which connects to compatible Nikon electronic flash units.

# Plus, All Other Nikon F2 Features:

- Titanium-foil-curtain focal plane shutter with speeds 10 seconds—1/2000th second.
- Automatic flash synch adjustment with "X" synch at "B", 1—1/80th second; "FP" synch at "B", 1—1/30 and 1/125—1/2000th second.
- Oversize, instant-return mirror with independent lock.
- Short-stroke film transport with plastic-tipcushioned, ratchet-action lever.
- Precise multiple-exposure control by depressing rewind button while operating transport lever; also operates with Nikon Motor Drive attached.
- Fast loading and unloading with hinged, detachable back and multi-slot take-up spool.
- Superior film flatness via 5-point flattening system with extra-large pressure plate, long guide rails, anti-bellying roller, emulsion-side-out winding onto take-up spool, and cassette stabilizer.
- **Dual-function self-timer** for either delayed shutter release after 2, 4, 6, 8, or 10 seconds or long exposures of same durations.

**Plus** depth-of-field preview, fingerguard for shutter lock and time exposures, stainless-steel reinforced neckstrap eyelets, chromed steel lensmount, film memo holder.

**Accepts all Nikon F2 interchangeable** finders, finder screens, motor drive systems, and film backs without modification.

The Nikon F2SB Photomic combines the basic F2 camera body with the Silicon Photo Diode DP-3 Photomic Meter/Finder, which offers an exceptionally wide sensitivity range: EV -2 to +17 (more than 500,000:1, without any booster accessory!). Brilliant LED meter readout plus illuminated shutter and aperture displays are easily visible in viewfinder in even the dimmest light—including accurate time exposures from 2 to 10 seconds, obtained by means of the Nikon F2 dual-purpose self-timer. In addition to this, the Nikon F2SB adds exciting new capabilities in conjunction with the accessory EE Aperture Control DS-2 which provides fully automatic exposure control with all Auto-Nikkor lenses with meter-coupling shoe (including all AI-Nikkor lenses).

#### Solid-State LED Readout

The Nikon F2SB Photomic incorporates an alwaysbright LED exposure readout system in place of the conventional needle and index mark. Either the shutter speed dial or aperture ring can be adjusted until the desired exposure setting is reached, according to this sequence:

| Overexposure by more than 1 f-stop        |  |
|---|--|
| Overexposure by 1/5 to 1 f-stop           |  |
| <b>─ ←</b> Correct Exposure               |  |
| — ● + Underexposure by 1/5 to 1 f-stop    |  |
| — ● + Underexposure by more than 1 f-stop |  |

Through this unique system, exposure techniques such as "bracketing" are immensely simplified, without any need to remove the camera from the eye or re-set film speeds. The solid-state meter circuitry is exceptionally shock-resistant and stable despite wide variations in temperature, humidity, or other factors.

# **Exposure Check Through Finder and From Above**

The complete information display in the F2SB Photomic finder includes 5-stage meter readout, plus lens aperture and shutter speed in use. A built-in illuminator makes aperture and shutter settings easy to read, even in low light. Exposure also can be checked in an LED window on top of the finder; this valuable secondary readout facilitates operation when the camera is on a copystand or at a low level, or held overhead (upside down). An eyepiece shutter is built in, shielding the meter cells from extraneous light when the photographer's eye is not at the finder eyepiece; this feature also insures excellent metering accuracy in unmanned and remote-control applications with the accessory EE Aperture Control Unit or when stop-down metering is used for bellows or other applications.

# Center-Weighted Full-Aperture Measurement

Nikon F2SB uses the Nikon center-weighted metering system, in which the meter responds to the entire image area but concentrates more than half of its sensitivity on the central 12mm area, outlined by a circle on the finder screen. Measurement is made at full aperture with all Auto-Nikkor lenses (including all Al-Nikkor lenses). Stop-down measurement is used with non-coupled lenses or accessories including

# **Nikon F2SB Photomic**

bellows units, extension rings, microscopes and telescopes; in these applications the greatly expanded sensitivity of the F2SB Silicon Photo Diode meter is a welcome aid. The meter switch is activated by the film transport lever; no separate operation is required.

### **EE Aperture Control Unit**

The accessory EE Aperture Control Unit DS-2 slides easily onto the Nikon F2SB and transforms it into a fully-automatic-exposure camera. It contains a powerful servo-motor which receives exposure information from the meter and adjusts the lens aperture ring *automatically* for correct exposure. No connecting cords are involved, and no modification of lens, camera, or finder is necessary. The EE Aperture Control Unit couples for automatic operation with any Nikkor lens with meter-coupling shoe. Powered by a self-contained, rechargeable nickel-cadmium battery DN-1, the Aperture Control unit can also operate on household current, using the accessory AC/DC Converter MA-4.

Equipped with EE Aperture Control Unit and Motor Drive, the Nikon F2SB Photomic offers unparalleled facilities for in-hand and remote-control photography. To this may be added a 250- or 750-Exposure Magazine Back and Intervalometer, providing accurate, fully automatic sequence photography at intervals of up to 8 minutes between exposures.... even completely unmanned operation for periods of several hours!

# Nikon F2 Data Recording Systems

These uniquely versatile Nikons provide unprecedented information capability for scientific, industrial, and forensic applications. A special, matched Data Back photographically imprints the time, date, and other information written on interchangeable memo plates. The information is exposed by a built-in electronic flash unit which assures consistent clarity and legibility, regardless of ambient lighting conditions or subject matter. Nikon F2 Data Recording Systems accept virtually all Nikon accessories including Motor Drive MD-2, EE Aperture Control Unit DS-12 for F2AS Photomic Finder DP-12, all Nikon F2 interchangeable viewfinders and finder screens, and all Nikkor lenses 6mm—2000mm for totally flexible picturetaking versatility.

Each Nikon F2 Data Recording System consists of two basic components:

- Special black Nikon F2 camera body with removable film plane mask, and selected Nikon F2 Photomic or Prism Finder:
- · Either of two Nikon Data Backs, each containing adjustable 12-hour timepiece (displays hours, minutes, and seconds), dating unit (year, month, and date), and memo plate slot (for insertion of written matter in 12x21mm area), as well as the built-in, battery-powered electronic data flash. Data Back MF-10 accepts standard 36-exposure film cassettes; Data Back MF-11 uses 250-exposure film loads in conjunction with a specially-matched 250-exposure film magazine MF-1 supplied with the Data Back. The 250-exposure Data System requires the MD-2 motor drive (purchased separately). Use of the MD-2 is optional when using the 36-exposure system.

Fast, Error-Free Operation
Film loading, lens mounting, exposure control, and shutter operation are performed exactly as with any Nikon F2. The photographer need only set the timepiece and dating unit, insert the memo plate with written information (if desired), and switch on the built-in electronic data flash, adjusting its intensity for the film speed in use. When the shutter is released, the Data Camera automatically imprints the time, date, and written notation on a 3.5mm x 10mm area at the left side of the 24mm x 36mm film frame. The special Type S focusing screen, included with each Data System, shows the imprinted area and offers the same 3-way focusing accuracy as the Type K screen: central 3mm split-image rangefinder, 1mm microprism circle, and overall matte Fresnel groundglass (as well as 12mm circle denoting center-weighted meter area).

#### Other Features

Data Systems with MF-10 36-exposure Back may be operated via the camera's film transport lever or the optional accessory Motor Drive MD-2; systems with MF-11 250-exposure Back are designed exclusively for use with MD-2. The MF-10 electronic data flash is powered by 2 AA alkaline batteries, Eveready Type E91 or equivalent; the MF-11 flash uses 4 cells (same type). Both flash units may be powered alternatively by an optional auxiliary 300-330v DC source, via their external power sockets. With alkaline cells, the flash units recycle in approx. 1 second at normal temperature; a special safety circuit activates the flash only when at full power to insure consistent data legibility. And, by removing the film plane mask and substituting a standard Nikon F2 camera back, any Nikon F2 Data Camera can be used as a normal F2 at any time.

Paramount to the Nikon concept of high-performance photography is this: photography's largest array of automatic firepower equipment. Each component is crafted to the standards of reliable precision that have made Nikon motor drives an essential element in sports, news, aerospace, industrial, scientific, and investigative photography throughout our world. Either of the two basic motor drive units attaches directly to the baseplate of any Nikon F2 camera, without modification; to the motor is added the desired power pack or supply, remote-control system, intervalometer -even, with MD-2, film magazine-or other accessories to provide the photographer with the ultimate in automatic capabilities.

#### **Motor Drive MD-2**

Compact, cordless motor fits directly on any Nikon F2 camera, without removing baseplate or even camera back -simply remove Open/Close key and screw on motor. Powered by the Cordless Battery Pack MB-1 or AC/DC converters MA-2 or MA-4, the motor is adjustable for either single-frame or continuous-burst operation, plus a special Lock position to prevent inadvertent firing. The 5-position speed selector permits rapid sequence operation from one to 4.3 frames per second with through-the-lens viewing, or 1 to 5 f.p.s. with the Nikon F2 mirror locked up. These high operating speeds may be obtained over a broad range of shutter speeds—from 1/125th second to 1/2000th second in continuous operation! Other shutter speeds to 1/4th second may be employed at slower motor speeds in continuous operation, and from B and 10-1/2000th second in singleshot mode. After the last exposure, the motor permits automatic film rewinding, requiring just 7 seconds for a 36-exposure roll. (With the accessory Camera Back MF-3, rewinding stops automatically while the film leader is outside the cassette—a valuable advantage with daylight-loading or automated processing systems.)

The MD-2 Motor Drive contains a built-in, subtractive exposure counter which may be pre-set to shut motor off automatically after a specific number of frames have been exposed, as well as a convenient hand grip with electrically-powered shutter-release button; the grip head (with Single/Continuous selector switch) is detachable for remote-control applications. The multiple exposure feature of the Nikon F2 camera may be employed at any time with the Motor Drive, by pressing the film rewind slide on the back of the motor while activating the shutter. A built-in relay permits radio, electrical, or modulated-light-signal remote operation with the appropriate Nikon accessories. LED signal lamp glows each time the motor completes an advance cycleparticularly valuable to confirm correct operation in remote control operation—and when the film has been automatically rewound. The motor measures 5.8" x 4.3" x 3.0" (147mm x110mm x 77mm) and weighs 16.6 oz. (470g). Supplied with Cordless Battery Pack MB-1 and two MS-1 Battery Holders, each accepting 5 AA alkaline batteries; Product No.7. Also available without Battery Pack and Holders, Product No. 2. The first Nikon Motor Drive for the F2, Model MD-1 (which is no longer available), was similar to the MD-2 but did not have the auto-stop mechanism on rewind, LED indicator or safety

**Note:** With the exception of the MF-3 back, all accessories for the MD-2 will operate with the MD-1 Motor Drive.

#### **Motor Drive MD-3**

A rugged, lightweight, economical motor drive incorporating all the engineering precision which has made Nikon motor drive systems the acknowledged standard in 35mm photography. Attaches directly to any Nikon F2 body after Open/Close key is removed; anatomical hand grip contains shutter button and single/continuous-burst selector. The MD-3 motor drive may be powered by the same MB-1 Cordless Battery Pack or MA-4 AC/DC Converter as the Nikon MD-2 Motor Drive, or by the special MB-2 Cordless Battery Pack (to be available soon). Firing speed in continuous mode is set automatically according to the shutter speed and power source in use:

The MD-3 motor permits continuous operation at speeds from 1/80 to 1/2000th second, with the firing rate determined automatically by the power source and shutter speed in use. All speeds, including "B", are

usable in single-frame mode. Built-in, manually-reset (subtractive) exposure counter turns motor off at "'0", enabling the photographer to expose any desired number of frames with automatic shutoff provision. For added versatility, MD-3 may be used with Nikon Modulite ML-1 remote system, Nikon Wireless Remote Control MW-1, Pistol Grip Model 2, and Nikon Intervalometers MT-1 and NC-2. (MD-3 does not accept SC-series extension cords or Nikon Cord System components.) The MD-3 with its built-in anatomical hand grip measures 4.2" x 5.8" x 2.4" (106mm x 147mm x 62mm) and weighs 13.2 ounces (375g) less batteries. Product Numbers for MD-3 Motor Drive and MB-2 Cordless Battery Pack will be announced soon.

# Speed Magny Backs for Nikon F2

Perhaps the most unique accessories in the Nikon F2 system, Speed Magny backs transform any F2 into a large-format "instant picture" camera for use with Polaroid® film packs, or a second model which uses standard 4x5 film holders. The Speed Magny replaces the regular, detachable camera back. All essential camera functions not related to the 35mm film—reflex viewing/focusing, through-the-lens metering, shutter speed control, flash synch, etc.—are retained, as is the superior picture quality and versatility of interchangeable Nikkor lenses.

### **Precision Optical System**

The Speed Magny optical system utilizes a magnifying relay lens in combination with a coated field lens and 2 optically flat, surface-coated mirrors. With Model 100-2 the system increases the size of the picture 3.2 times to fill the  $3\frac{1}{4}x4\frac{1}{4}$  Polaroid format. Image size is the same as if taken with a lens 3.2 times longer than the one used. With Model 45-2, the increase is 4.1 times.

Because of the difference in proportions between the 35mm and  $3\frac{1}{4}x4\frac{1}{4}$  or 4x5 formats, slightly less picture length is recorded on the film than is shown in the Nikon finder.

Use of Speed Magny units requires increases in exposure over those normally indicated by the emulsion speed: an 18-time increase with Model 100-2 and a 20-time increase with Model 45-2. Photomic meter systems can be programmed accordingly via ASA setting.

#### **Film Holders**

Speed Magny 100-2 has built-in holder for Polaroid  $3\frac{1}{4}$ x $4\frac{1}{4}$  film packets. Speed Magny 45-2 accepts standard holders for 4x5 Polaroid and regular sheet film.

#### Internal focusing:

A new Nikon technique has produced a new class of telephoto lenses.

Nikon first used the term ''internal focusing'' about 10 years ago. What does this term mean, what advantages does this principle have for the user and what types of lenses are equipped with this technology?

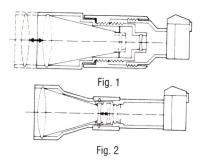

As a rule, every normal lens focusing system has a system which moves the entire optical system in a barrel during focusing (Fig. 1). This mechanism is complicated and bulky and has to be made of particularly robust material. These preconditions are invariably disadvantageous in terms of the weight and size of the lens. As the focal length and maximum aperture increase, lenses based on this conventional design become technically more complicated and heavy.

Although these conventional lenses are based on well established designs, Nikon has nevertheless been making efforts to improve the focusing systems of long focal length lenses. The result is a new class of telephoto lenses, lenses with internal focusing-referred to as the IF system below. This IF system permits very convenient and rapid focusing. This is particularly important where the photographer is concerned with newspaper reporting or sport or animal photography-subjects which do not leave him very much time for focusing. Furthermore, the total length of a conventional lens changes during focusing, making hand-held shooting with long focal length lenses more difficult; this is not the case with the new IF designs. Here, an easily operated ring in a convenient position permits focusing with a completely rigid barrel. Because a lens group is moved inside the lenses system (Fig. 2), these new Nikkor lenses are unusually compact and free from any change in the centre of gravity.

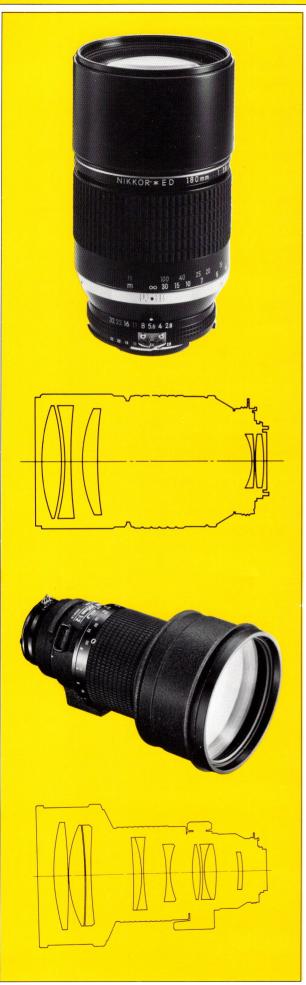

At the same time, this novel technology has made it possible to achieve substantially better imaging and an unusually short minimum focusing distance. These lenses are therefore also suitable for close-ups (for example of small animals) from relatively far away.

Most IF Nikkor lens systems have lenses made of ED glass. Because of its particularly low dispersion, this ED glass permits exception correction of color abberation over a very wide wavelength range. The optical properties of ED glass are similar to those of calcium fluoride glasses; however, the ED glasses have the great advantage that the low dispersion remains constant over a wide temperature range. Moreover, this material is much harder and much more scratch-resistant and is therefore also suitable for front and rear lens elements.

The ED lenses provide a substantial improvement in quality: significantly cleaner contours coupled with sharp focus and fresher colors with greater saturation - and all this with the aperture fully open!

Product number: 1439

This lens was specially designed for photography at night and in poor light. It has an aspherical lens surface in order to correct coma at full aperture. Bright image areas against a dark background are optimally reproduced. The large maximum aperture permits high shutter speeds, particular important for night photography without a tripod; also, the bright maximum aperture yields a viewfinder image that is exceptionally bright, permitting particularly fast and precise focusing even when illumination is poor.

Nikon's EL-Nikkor enlarging lenses are designed to handle virtually any printing job from the home darkroom to industrial laboratory. EL-Nikkor enlarging lenses are specifically computed for optimum performance at the most widely preferred enlargement sizes, according to focal length. Resolving power, contrast, evenness of illumination and flatness of field far exceed the capabilities of conventional optics. This ensures that every

detail on the negative is transmitted clearly to the print.

Like all Nikon optics, EL-Nikkor enlarging lenses are constructed of our own optical glass—the first step in lens manufacturing to guarantee optimum performance. Their design is corrected for chromatic aberration beyond the visible spectrum into near-ultraviolet wavelengths to which photographic papers are particularly sensitive. This helps ensure against focus shift at every aperture and magnification. And, because of their near apochromatic color correction and exceptional contrast, EL-Nikkor lenses are especially prized by professional color printers.

The latest EL-Nikkors (denoted with an "N") feature transilluminated f/numbers and an adjustable aperture window to position the scale towards the user for convenience of operation. Others have dual, large-numeral aperture scales for easy visibility. All EL-Nikkor enlarging lenses are front-threaded to accept screw-in accessories for special effects work. Lenses from 50mm to 135mm are supplied in the universal (35mm) "Leica" thread mount.

#### **EL-Nikkor Accessories**

There are two kinds of accessory rings for mounting EL-Nikkor lenses onto process cameras of either the vertical (i.e., enlarger-type) or horizontal configuration. One side of the ring fits the attachment thread of the lens; the other side fits the screw mount thread (d=39mm, P=1/26''). The ring facilitates reverse mounting on a process camera by simple connection of the front filter attachment thread with the screw mount thread.

#### EL-Extension Ring (15mm)

Some enlargers employ a slide-in mounting system which will accommodate a lens to which a base plate has been attached. This extension ring is designed for use with several EL-Nikkor lenses in which the rear lens element protrudes beyond the lens mount thread making regular mounting impossible.

## **Close Up Accessories**

Nikon close-up attachment lenses occupy little space and are easy to carry along. They screw directly into the front thread of the lens (52/62mm diameter), providing a simple and convenient way of increasing magnification. The lenses have no effect on automatic exposure control and TTL metering. Nikon Integrated Coating (NIC) is applied for improving image contrast and reducing flare. Close-up attachment lenses no. 0, 1 and 2 are recommended for use with lenses having a focal length of up to 55mm. Lenses no. 3T and 4T are two-element achromat lenses providing high image quality, and are intended primarily for 85mm to 200mm lenses. The greater the diopter value of the attachment lenses, the closer the subject can be approached. The longer the focal length of the lens used, the greater the magnification which can be achieved. Nikon Close-up Attachment Lenses can be used with a large number of Nikkor and Series E lenses, either singly or in combination, and are an attractive option for beginners in close-up photography.

PF-4 Repro-Copy Outfit

**PF-4 Repro-Copy Outfit**This useful accessory converts your camera into a professional copying unit with excellent stability. The camera cradle travels along a robust column which has a rectangular cross-section to ensure precise axial alignment. A built-in counterweight facilitates height adjustment. A separate control is provided for fine focusing. The camera can be inclined 45° or 90° to the right or left to increase the subject field. The black surface finish of the entire unit helps to reduce scattered light and flare. This unit is very useful for copying flat or three-dimensional subjects in schools, design workshops, etc. The PF-4 is suitable for all Nikon cameras, with or without motor drive.

### Working distance:

Distance between subject (in sharp focus) and the front edge of the lens barrel. If the lens is reverse-mounted, this distance is the distance between the subject and the rear edge of the lens.

Notes:
1) Magnification at Infinity setting.
2) If there are several lenses, the magnification data applies only to the first lens (e.g. for 24mm t/2.8 and F/2, it applies to 24mm t/2.8).

3) The 135mm f/2 and PC-Nikkor 28mm f/3.5 lenses cannot be reverse-mounted since the diameters of the front

rings are too large.
4) For close-up and macrophotography, we particularly recommend the following lenses: Micro-Nikkor 55mm f/2.8 and Micro-Nikkor 105mm f/2.8.

### = only with PB-6

1) Optimum picture quality with f/8

3) The smaller the aperture the better the picture quality, unsuitable for reproduction.

3) The smaller the aperture the better the picture quality.

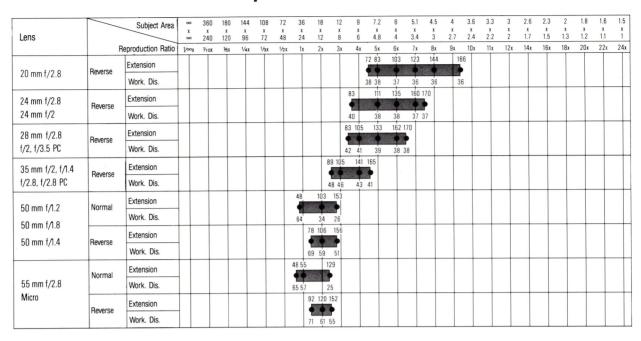

4) Optimum picture quality with f/8; the quality deteriorates with smaller apertures; The 50mm f/1.2 lens is not without for consolidation.

5) Unsuitable for reproduction.

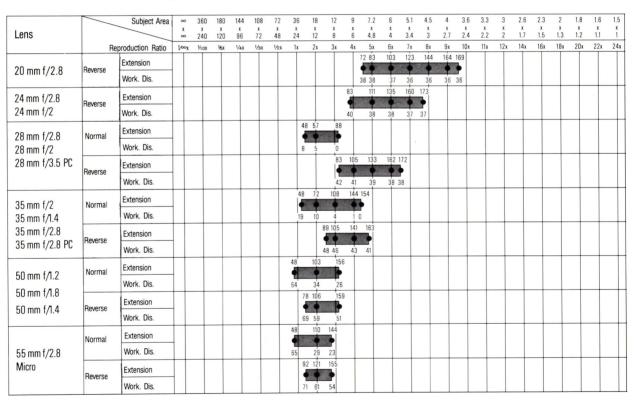

6) The picture quality in the corners becomes poorer with low magnification.

### **Auto Extension Tubes**

The Nikon auto extension tubes can be attached to your camera bayonet with a simple action and permit a large number of different magnifications. These four tubes (PK-11, 12 and 13 and the PN-11) can be used either singly or in combination between camera and lens and retain the automatic function and meter coupling of the Nikkor and Series E lenses. In other words, the picture composition, focusing and metering can be carried out at the bright, full-aperture position without having to stop down the lens manually before shooting. These extension tubes have no effect on automatic exposure control of the corresponding Nikon cameras.

### Filters for Black-and-White Film

The spectral sensitivity of black-and-white films differs from that of the human eye. For example, these films are much more sensitive to blue and to the invisible ultraviolet range. It is for this reason that blue sky appears light in a black-and-white print. On the other hand, yellow shades are reproduced darker than we normally perceive them. This helps to explain why many black-and-white photographs shot without filtration are lacking in contrast.

Filters for Color Film
Nikon filters for color film allow the photographer to balance and/or correct the available lighting to meet
the needs of the film in use; color imbalance occurs whenever the color temperature of the light does
not correspond to the film sensitization. Daylight film, for example, is calibrated for correct color reproduction
with illumination having a color temperature of 5500%; this corresponds to sunlight illumination in clear
weather at about midday. If the ambient illumination differs from this, deviations in color reproduction
will occur. Such deviations can be substantially compensated by using Nikon filters.
