EXTRA GROUND GLASS FRAMES WITH GLASS FOR DEK-LLO CAMERA

Where cameras are used for plates, packs and magazines, it is frequently necessary to have an extra ground glass frame where the focus of the pack or magazine does not coincide with the plate focus as only the frame for plates is included with camera. Purchaser must be certain to give the control number of the camera, which will be found on the camera itself. On new cameras coming out this will be changed so that the focus will be universal for all equipment.

CRYSTAL GROUND GLASS

The celebrated "Velvet" ground glass is now again obtainable in the sizes listed below and, in view of its superior quality, should be used for all purposes connected with photography, autochromes, transparencies, etc. Particularly necessary for all high grade cameras because of its thinness, strength, flatness and extremely fine grinding.
